Impacted Area

Aspen Trails Park Proposed Stormwater Improvements

The Village of Mount Prospect is planning improvements to reduce stormwater flooding near Aspen Trails Park and the neighborhood tributary to Levee 37 Pump Station #2 (see purple shaded area in map at left).

The River Trails Park District is also working on plans to update the recreational amenities (i.e. playground equipment, athletic fields and courts, etc.) at Aspen Trails Park. In conjunction with this work, the Village plans to construct an underground storm water detention facility beneath the park. This new facility will temporarily store stormwater during severe rain events.

After the stormwater improvements are completed, the park will be restored to a flat, level, surface. When all work is complete, the neighborhood will enjoy new park facilities and improved stormwater protection.

If you would like to learn more, but are not able to attend the meeting, please call Public Works at 847/870-5640 or send us an email at publicworksdept@mountprospect.org.
